

Inventigo and GridGain Systems Team Up on Delivering Cloud-Enabled High Performance XML Processing

Inventigo and GridGain System partnered up in delivering industry first dedicated solution for high performance XML processing on highly distributed cloud computing infrastructure. The integration between GridGain's Open Cloud Platform and Inventigo's FastXML product provides ready to use solution for processing large XML payloads in near real-time fashion.

San Francisco, CA ([PRWEB](#)) February 26, 2009 -- [Inventigo](#) and [GridGain](#) System partnered up in delivering industry first dedicated solution for high performance XML processing on highly distributed cloud computing infrastructure. The integration between GridGain's Open Cloud Platform and Inventigo's FastXML product provides ready to use solution for processing large XML payloads in near real-time fashion.

Says Nikita Ivanov, founder of GridGain project, "It is often overlooked by many software architects how a seemingly simple problem of parsing XML data can become a significant performance problem when using generic SAX and DOM XML parsing methods. With FastXML's unique patent-pending technology for generating custom streaming parsers based on visual annotation of XML schema with processing logic in Java and GridGain's ability to parallelize processing logic on the cloud our customers can employ one of a kind capability of processing massive XML payloads in near real-time - something that was practically impossible just few years ago..."

Adds Michael Gurevich, founder and CEO of Inventigo, "We are very pleased with the partnership. The glove-fit synergy between FastXML's ability to overlap parsing with invocation of relevant services and GridGain's core ability to distribute invoked services not only dramatically accelerates performance of XML-based applications but it also achieves it with an elegant ease. The applicability is endless..."

About GridGain Systems:

GridGain Systems develops open source Java grid computing platform licensed under LGPL and Apache 2.0 licenses. It is available free for immediate download on all major operating systems at www.gridgain.com. Since its first release in August of 2007 GridGain became the fastest growing Java grid computing infrastructure with tens of thousands of downloads and hundreds of deployments around the globe.

About Inventigo:

Inventigo (www.inventigo.com) specializes in technology assessment advisory service and in developing innovative software solutions. Our advisory practice provides independent, objective and actionable advice to enterprises that seek to achieve and sustain competitive advantages by acquiring or developing innovative technology solutions. Our complimentary software development practice leverages extensive portfolio of innovative and patented products to help our clientele with developing solutions that address challenging

technical requirements.
