GridGain In-Memory Data Fabric

Powered by Apache Ignite (TM)

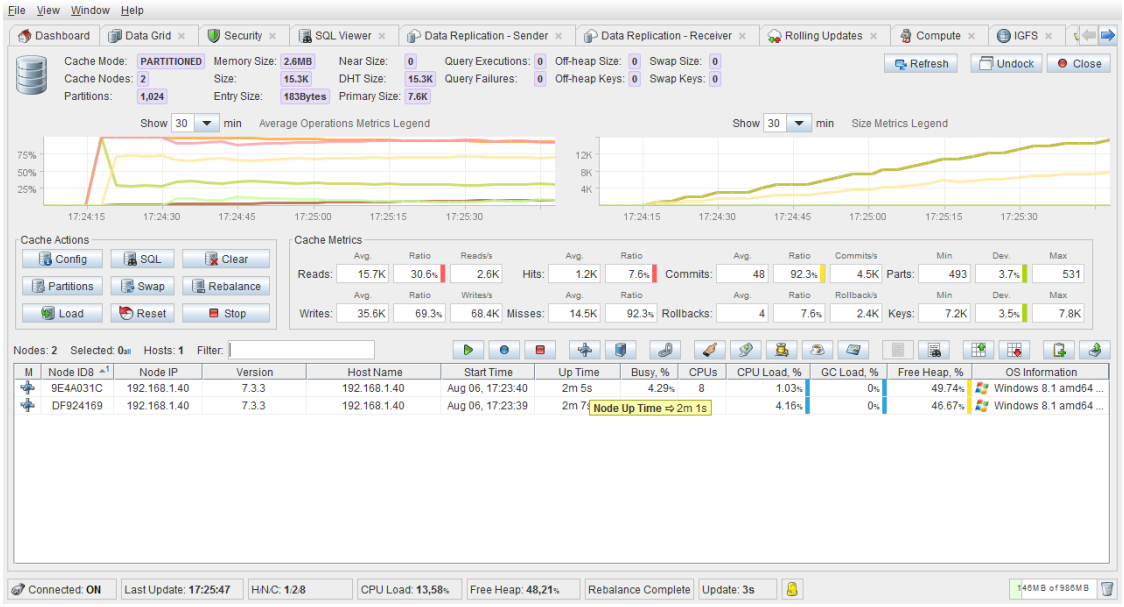

GridGain In-Memory Data Fabric is based on Apache Ignite[tm] and contains all the features and APIs available in Apache Ignite[tm].

GridGain In-Memory Data Fabric comes with GUI Managements Consoles named Visor delivering advance set of management and monitoring capabilities. Visor is a standalone Java application.

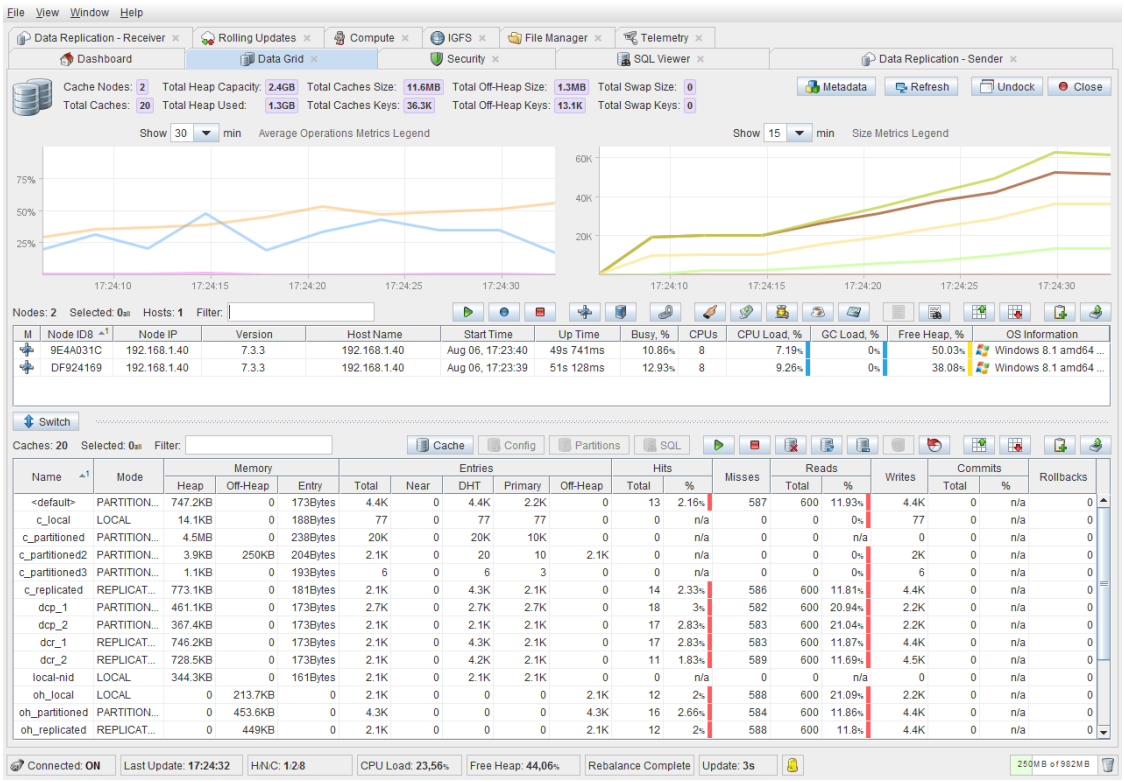

To start Visor execute the following command: `bin/ggvisorui.sh`

On Windows, run the same commands with `.bat` extension.

Here is an example of `Visor Cache Tab` which provides view on individual cache.

Here is an example of `Visor Data Grid Tab` which provides overall view on data grid.

More documentation on Visor features can be found here:
